

PHYSIOTHERAPY AND ARTHRITIS

How physiotherapy can help

Physiotherapists are part of a multidisciplinary team that can help you manage your arthritis. They will help you stay active and keep moving.

Strategies might include:

devising a tailored exercise programme

building your strength, stamina, mobility, and activity levels

supporting you to develop skills to manage pain, swelling, and stiffness

A physiotherapist will assess you holistically, and help you access care from other professionals to help you manage your arthritis.
