Direct access and patient/client self-referral to physical therapy

Policy statement
Direct access and patient/client self-referral to physical therapy

The World Confederation for Physical Therapy (WCPT) advocates that direct access to physical therapy and patient/client self-referral will allow service users to meet their physical therapy goals. Physical therapy professional entry-level education prepares physical therapists to be primary contact autonomous practitioners, able to examine/assess, evaluate, diagnose, intervene/treat, determine outcomes and discharge patients/clients without referral from another health professional (eg medical practitioner) or other third party. 1 Further, WCPT advocates for service developments and delivery models that allow patients/clients improved access to physical therapy services through the ability to refer themselves directly to a physical therapist.

The terms direct access and patient self-referral refer to the circumstances where physical therapy services are available to patients/clients without the requirement of a referral. 2 In many health service delivery systems throughout the world, the users of physical therapy services do not require such a referral. 3 In these instances, direct access to physical therapy services is supported by national/provincial/regional/state legislative frameworks and by the standards of professional practice of physical therapists. A growing body of research evidence supports the clinical and cost effectiveness of such services and their acceptability among service users. 4-12

WCPT advocates for the right of those seeking physical therapy services to self-refer to a physical therapist if they so desire and believes that this right promotes the autonomy of users of physical therapy services and enables fair and equitable access to such services.

WCPT advocates for social security or health insurance reimbursement models that do not require the referral of a medical practitioner before a patient/client may seek the services of a physical therapist.

WCPT encourages member organisations to:

- advocate for direct access and patient/client self-referral with national/provincial/regional/state health departments, health professions and other organisations, such as those that provide reimbursement for physical therapy expenses and those that represent service user groups
- ensure that physical therapist professional entry level education programmes prepare physical therapists as independent autonomous practitioners able to see patients/clients without a third-party referral1
- ensure the provision of post-qualifying continuing professional development opportunities to support physical therapists in the delivery of direct access and patient/client self-referral
- support research efforts aimed at evaluating direct access and patient/client self-referral services
- make their members aware of resources to support the implementation of direct access and patient/client self-referral services
- make their members aware of their professional, ethical and legal responsibilities when providing direct access to physical therapy services
