Infographic 1: An exercise plan from a physiotherapist can help your COVID-19 recovery

Exercise is an important part of your recovery from COVID-19, paced to match your needs. As experts in movement and exercise, physiotherapists can guide you in how exercise can help

Try to be as active as you can to help you regain strength and help your lungs recover and remember to keep track of your progress.

Although it is important to rest, physiotherapists recommend that you undertake regular short bursts of exercise rather than fewer longer sessions. Exercises to try:

Post-viral fatigue syndrome: Up to 10% of people recovering from COVID-19 may develop post viral fatigue syndrome (PVFS). If you feel you are not improving, or if activity is making you feel much worse, speak to your physiotherapist or healthcare practitioner and ask them to assess you for PVFS. The rehabilitation of people with PVFS requires different management strategies.

World Physiotherapy response to COVID-19 briefing paper 2: Rehabilitation and the vital role of physiotherapy

Physiotherapy can play an important role in the rehabilitation of people who have been severely ill with COVID-19 in a hospital or other setting. These people are at risk of encountering (severe) limitations in physical, emotional, cognitive and/or social functioning.

Physiotherapists are crucial in early and ongoing rehabilitation for people recovering from severe COVID-19. They can help with:

- early mobilisation and getting moving again
- simple exercises
- getting back to the activities of daily living
- lung recovery
- managing breathlessness
- coping with fatigue
- finding the balance between being active and taking rest

It takes time to recover from a severe illness – a physiotherapist will be able to guide you through the process and prioritise the goals that are important to you. They will work as part of multiprofessional teams to support your needs.

Benefits of using telehealth for rehabilitation.

Introduction to telehealth. Physiopedia

What is telehealth? Telehealth or eHealth is the use of electronic communications to share medical information to improve a person's health.

Introduction to telehealth. Physiopedia

Why use telehealth? COVID-19 has affected face to face time between healthcare professionals, including physiotherapists, and patients. Telehealth means you can access physiotherapy services from your own home.

New to physiotherapy and telehealth? Irish Society of Chartered Physiotherapy
As movement experts, physiotherapists can play an important role in the COVID-19 pandemic and help people who are at risk of functional decline during periods of social distancing and quarantine.
